

Performance at low temperature

6th October 2006

To whom it may concern,

Corro-Coat EP-F 1003 LD complies with the requirements of CSA Z245.20-02 which includes flexibility at low temperatures down to -30°C.

At temperatures lower than this the flexibility and impact resistance of the coating will be reduced. However should no external impacts or stresses be applied the coating would be acceptable for storage at temperatures down to at least -40°C
